

Strengthening of Computer Network

- ❖ Continuous efforts are being made for uninterrupted (Local Area Network) LAN and Internet connectivity to CPCB officials of various Divisions/Sections.
- ❖ Total computing nodes including wired and wireless network connectivity are about 1200. The technical support was taken from NIC (National Informatics Center) to ensure that the security issues are addressed in time to prevent the vulnerabilities attacks from outside and inside of the network using firewall and Antivirus.
- ❖ 100 Mbps upgraded MTNL leased line connectivity is installed in CPCB network with 34 Mbps PGCIL leased line as a backup connectivity of network
- ❖ Network Attached Storage (NAS) has been installed and configured to unleash the Digital Space for users and exponentially increasing data.
- ❖ Latest Video Conferencing System installed and strengthens the VCs by bringing up all SPCBs/PCCs on the same platform in order to minimize the travel time, cost and faster decisions.
- ❖ Mini Data Center (Server Room) with smart surveillance, cooling system especially for Servers is implemented to accommodate more 50 servers
- ❖ Senior officers are provided with laptops with latest configuration for effective work coordination and quality of output.
